Instructions for Attachment TWR

For wastes received from offsite sources only.

Summarize your Annual receipts and handling of hazardous wastes that originated from offsite sources. Do not report here the handling of hazardous wastes from permitted onsite storage that was initially received from offsite sources in previous years.

This information must be obtained from, and accountable to, your hazardous waste manifest records and TSDR operating log. The wastes reported should include any unmanifested wastes received. The records you use for this report must be reconciled with records of generators who ship hazardous wastes to you, else each must file manifest discrepancy reports. Corrected data must be shown on the copy of the manifest that you return to the generator. Document the reasons for any corrections to manifests or other official records by using laboratory analyses, actual weights from scale receipts, etc.

Complete one line for each combination of delivering transporter and generator from manifest involved in the handling of a waste.

Page _____ of _____ - Number each page in the space provided on the upper right side of the report.

Waste Stream Name/DOT Shipping Name

Enter only one of either a descriptive waste name or the generic DOT shipping name.

Enter each different waste or waste combination on a separate line. Enter various mixtures of the same constituent wastes on the same line unless the hazard characteristics of the resultant mixtures are different.

EPA Waste Codes

Enter the applicable hazardous waste code(s) which identifies the waste or combination of wastes. See Rules 1200-1-11-.02(3) and (4) for the EPA waste codes. (For example, F001, K001, D001.)

Amount Handled (in kilograms or pounds)

Enter the accurate amount of wastes handled in kilograms during the reporting year from the specified generator by the specified transporter. Use the Total Quantity (Item 13) from the Manifest after converting it to kilograms or pounds. The weight reported should include the weight of the drum unless you know that the waste will be removed from the drum and the drum will not be handled as a hazardous waste.

For conversion, 2.2 pounds equals one kilogram. Convert volume into kilograms taking into account the appropriate density or specific gravity of the waste. For example, water weighs 8.34 lbs./gallon. A full 55 gallon drum of hazardous wastewater with a specific gravity of 1.02 should be reported as 55 gallons * 1.02 * 8.34lb./gal ÷ 2.2lb./kg. = 212.67 or 212.7 kg.

Shipment

Enter the number of separately manifested shipments during the reporting year for each line completed.

Generator ID number

Enter the Installation Identification Number of the generator from which the waste was shipped. Enter only one number. Only if a conditionally exempt small quantity generator (CESQG) does not have an Installation ID, enter the generator's name preceded by the generator's state postal abbreviation.

Transporter ID number

Enter the Installation Identification Number of the transporter who delivered the waste to your facility. The transporter who delivered the waste may not have been the transporter who picked up the waste. Enter only one number.

Handling Codes (State)

Enter the TSDR Handling Codes that most closely represent the techniques you used during the report year at the facility to handle the waste. Enter all codes that are applicable in the order of handling of the waste. Use only the TSDR Handling Codes and not the Waste Management Codes.

Management Method Codes (EPA)

Enter the Management Method Code that best represents the techniques you used to handle the waste through final disposition. Refer to the Management Method Codes on the Code List.

Totals

Sum the amount shipped and the number of shipments for each page and record the total of all pages on the last page.
